

The new DIRECTV Low-Pro Easy Mount REDUCES INSTALLATION TIME, SAVES SPACE and IMPROVES CUSTOMER SATISFACTION!

The DIRECTV Low-Pro Easy mount is smaller and easier to install than our standard mount. With a profile that is 11 inches shorter, your customers will be happier about having their dish less conspicuous on their property.

BENEFITS OF THE LOW-PRO EASY MOUNT INCLUDE ►

The Low-Pro Easy Mount works with all dish types.

REDUCES INSTALLATION TIME

- Works with all dish types (standard 2" diameter collar required).
- Less drilling (monopoles not required).
- More options on site.
 - Can be used on a non pen mount.
 - Converts to a standard mast without installing a different foot or relocating dish.

SAVES SPACE

- Takes up less space on trucks and in your warehouse.

IMPROVES CUSTOMER SATISFACTION

- Lower profile reduces visibility of LNB and assists in meeting Home Owner Association requirements for dish visibility.
- Less drilling reduces the risk of property damage.
- Less time installing means more DIRECTV!

Be sure to review the facts below and use good judgment when determining if the Low-Pro Easy Mount is the best hardware option for your customer's installation.

WNC Version

PBI Version

SPECIFICATIONS ►

- Low-Pro Easy Mount application is designed for roof mounts only.
- Does not require monopoles, but still requires all other mounting practices as outlined in the SPIG for roof mounts using the 2" standard foot and mast.
- There is an 11 inch variance in height on the stubby mast versus the standard foot and mast.
- The Low-Pro Easy Mount utilizes a reinforced version of the DIRECTV standard foot.
- There are currently two different styles of approved Low-Pro Easy Mount (pictured far left).

INSTALLATION CONSIDERATIONS ►

- **Line Of Sight (LOS):** The Low-Pro Easy Mount is 11 inches shorter than the standard roof mount.
- **Possible installation limitations in certain regions:** The feed arm or LNB may contact the roof when mounted on a north facing roof pitch with an angle near 45 degrees in the following regions:
 - Midwest (i.e.: Minot ND), Pacific Northwest (i.e.: Bellingham WA), NewEngland (i.e.: Bangor ME)
- **Winter weather limitations:** Because the Low-Pro Easy Mount is shorter, regular snowfall may cause the LNB or reflector to be more easily covered by accumulating snow.
- **Roof pitch limitations:** The Low-Pro Easy Mount should not be used on a roof pitch greater than 45 degrees.
