## Award-Winning XM Satellite Radio Products

You don't have to replace your radio to get XM. It's quick and easy to add XM to your existing car or home stereo. XM has state-of-the-art products — the smallest and lightest satellite radios and antennas in the industry, including the world's first personal XM satellite radio, the Delphi XM MyFi™.

You'll still be able to listen to AM, FM and your CD or cassette player. And all XM radios display the channel name, artist name and song title, so you won't have to ask "what's the name of that song?"

Thinking of buying a new car? More reasons to think XM Radio. XM-equipped audio systems are available on over 100 new cars in the 2005 model year.
