

# Factory Installed Anti-Ice Antenna System

The Global Skyware Antenna Anti-icing Systems are designed to keep the reflector and feed horn free from ice and snow during most inclement weather conditions. An automated sensor will energize the reflector and feed horn heaters, when temperatures fall below 3°C (38°F) and when moisture is present. This sensor prevents the system being activated unnecessarily to conserve energy.

Each Factory Installed Anti-Ice System is pre-wired to the reflector and includes a feed horn heater kit. Each Anti-Ice System comes with a 9m (30ft.) power cord plus mounting hardware and bracket for the sensor. The heater elements are protected by a durable ABS cover over the lower rear half of the reflector. The Anti-Icing System is available in 120V or 240V versions.

ANTENNA SIZE	POWER CONSUMPTION		CURRENT DRAW	
	120V	240V	120V	240V
74CM	163W	163W	1.4A	.85A
98CM	163W	163W	1.4A	.85A
1.2M	300W	300W	3A	1.5A
1.8M	600W	600W	5A	1.5A
2.4M	763W	776W	6.4A	3.3A
